

SERIES 2000

GrowSpan Series 2000 Greenhouses

takes cannabis operations to the next level

S2000 Commercial Greenhouses feature “bomb-proof” polycarbonate cladding for strength and security. These are a great option for cannabis businesses, because they can be gutter connected for expansion on the fly, allowing your operation to continually develop.

The GrowSpan Greenhouse Structure Advantage

Turnkey and custom designs - Ensure your operation gets the ideal structure.

Environmental control - Produce thriving crops in any region.

BLACKOUT STYLE

GrowSpan **Blackout Systems** enable more harvests per year and minimize labor

GrowSpan Blackout Systems maximize your business potential by allowing you to gain complete control over the photo period and lower labor costs. Designed specifically for the Series 500, 1000 and 2000 Greenhouses, GrowSpan Blackout Systems create the optimal growing environment, supporting a more profitable business.

The GrowSpan Blackout System Advantage

Seamlessly integrate into Series 500, 1000 and 2000

Available in convenient packages - Stand-alone Blackout

HEMP STRUCTURE

GrowSpan **helps you produce the most** profitable hemp and maintain a thriving operation

GrowSpan provides a wide variety of growing structures and products that allow you bring your hemp operation to the next level. Whether you're looking to get your crop off to a strong start or for an innovative growing solution, GrowSpan can keep your business thriving year-round.

The GrowSpan Hemp Advantage

TESTIMONIAL

Purple Med Healing & Green Med Wellness Tucson, Ariz.

CHALLENGE – Year-round growing environment
SOLUTION – GrowSpan Series 2000 Blackout Greenhouse
SIZES – 30' wide x 96' long
APPLICATION – Cannabis production

At the Purple Med Healing and Green Med Wellness centers, patients are the priority. The company is a state-approved and licensed MMJ dispensary located in the lower part of Arizona. They produce the highest-quality medical marijuana, ensuring customers a healthy and happy experience.

Since Purple Med is located in the desert, growing cannabis is difficult. With the intense heat and dry climate, it's impossible to grow any crop year-round without some type of controlled environment. This is how Purple Med knew their business was going to require a greenhouse.

After thorough research, Purple Med decided to purchase a 30' wide by 96' long GrowSpan Series 2000 Greenhouse with a full blackout system. The unique 3,000 square foot building has a concrete substructure with the greenhouse sitting on top. Purple Med can grow around 650 plants in 7 gallon pots inside the greenhouse, and when some plants get bigger, they are shoveled and planted into the ground outside.

More on Purple Med Healing

The greenhouse also features an evaporative cooling system and multiple AC units. Head grower Casper Garret explained, "In Arizona we deal with the heat a lot. With the addition of the water wall and AC units, it's really comfortable in here. When it's 115° outside, we can dial it in here to be a comfortable 75° and a relative humidity of about 50% or so."

The Purple Med's experience with their GrowSpan greenhouse has been positive, especially when it comes to the controlled environment. "The innovation that GrowSpan has brought to the table has helped us a lot to be able to keep the temperature in relative humidity and our CO2 usage at optimal performance levels," Garret said.

The company expressed they would recommend GrowSpan to other cannabis customers. "Everything has worked up to par. The whole time the greenhouse has been here, our blackout system has worked great. What GrowSpan has brought to the table and what they put into this facility has helped us a lot
