

Clear Lines, Reliable Power

Tree trimming is done along electric lines in order to maintain the necessary clearance between lines and surrounding trees. The diagram below illustrates the minimum clearance required for safety.

Notes: _____

Tree Trimming/Pruning

Clear Lines, Reliable Power

Eversource will be pruning and cutting trees along power lines in your area in coming weeks.

Tree limbs, branches and roots can come in contact with power lines Eversource maintains – damaging equipment and causing public safety hazards. Our goal is to ensure safe, reliable electric service with minimal service interruptions while ensuring the proper growth of trees around power lines. There is no charge for this service.

Eversource's Vegetation Management program is managed by certified arborists and other professionals with vast experience in arboriculture. We also rely on highly qualified line clearance contractors with decades of experience in New England. The name of the contractor who will be working in your neighborhood is listed below.

Asplundh Tree Expert LLC
